### INCIDENT SUMMARY

An underground steel line developed a leak that bubbled to the surface, ran down a dirt road, and down a drainage, eventually impacting a seasonal stream. Approximately 8 barrels of treated injection water was released. Water samples were collected from upstream, at the point of impact, and downstream of the point of impact. No sheet was visible at the site. Sample results are still pending.

Clean-up contractors are on site. The spill is in an area of suitable habitat for a threatened species- clean up activities will commence once the Fish and Wildlife Service has assessed and given approval.

The nearest oil well is 4-26-8-17.

Reporting party will notify BLM and UDOGM by email.
