INCIDENT SUMMARY

Caller reports discovery of a production water release today, into secondary containment - the berm containment surrounding storage tank. Lindsey Russell 2-32B4 well pad. Was reported to caller at 16:30 Release was caused by a faulty check-valve on a 1-inch discharge line which they have isolated and removed from service until repaired. Likely started last night or this morning. They were able to by-pass with use of system valving. Release went to soils and gravel within secondary containment. Estimated volume of release is 457 barrels. Crew was able to recover estimated 220 bbls using a water/VAC truck. Company will conduct a Root-Cause-Analysis (RCA). No impact to surface waters or drains.
