INCIDENT SUMMARY

Caller reported that a wax plug on the treater failed under pressure releasing 10 barrels (bbls) of crude oil at the well head. An approximate 1/2 bbl of crude oil sprayed off-location. Crews discovered the release on the morning of 1/1/2023 and collected the waxy crude oil from the snow for disposal at the Brennan Bottoms facility. Well location is scheduled to be micro-bladed in the spring of 2023 and any residual contamination on the soils will be addressed at that time. Caller will notify BLM and Utah DOGM of the release.
