INCIDENT SUMMARY

The caller is reporting a ruptured liquid gathering line resulting in the release of 140 bbls of produced water and 10 bbls condensate to the surrounding soils and a dry wash. The liquid ran 1556-feet along a narrow path into a rocky dry wash, eventually collecting in a dry pond at the end.

The standing water was hydro-vacuumed, removing stained soils and condensate. They will work with BLM to complete cleanup activities with a backhoe to excavate impacted soils.
