INCIDENT SUMMARY

Caller reported that a microburst of wind caused a building to blow down which broke a pipe that feeds injection well #RW23-18B. Approximately 10 barrels of injection water was released and a certain amount of the release misted into the air and covered about two-thirds of an acre of sagebrush. The valves to the well were shut off within 10 minutes which secured the release. No waterways were impacted. Clean-up will commence tomorrow.
