INCIDENT SUMMARY

Caller reported that a corroded valve on a production water pipeline resulted in the release of 75 barrels of produced water. The majority of the release was contained inside the containment structure (valve can - NBU21-25K3) with 3 barrels running off-site alongside a roadway. A hydro-vac truck was used to remove the top 6 inches of soil from the release path. Removed soils will be disposed of at the RNI Wonsit disposal facility.
