### INCIDENT SUMMARY

Caller reports observation of possible nefarious dumping of produced water from operator's well pad by unknown entity. Facility operator arrived to site (Lat 39.97349, Long -109.75256) and observed truck tracks presenting across the pad to the opposite end where a spill path was observed. Site is not far from network of access roads. Operator suspects the material released is produced water based on characteristic odor, lack of visible inclusive material (e.g. no visible hydrocarbon component) and mild reading from PID (40ppm). Spill path could be tracked about 1/2 mile (0.45) downstream into an ephemeral stream, identified on USGS map as Willow Creek. Nearest perennial stream is miles beyond. Pad owner/operator is investigating own records gathering disposal documentation, manifests, etc. in an effort to reconcile and ensure that final disposition of all waste generated by the owner/operator has been properly delivered and disposed.

### CHEMICAL(S) REPORTED

|                  |           |
|------------------|-----------|
| Production Water | 1 Gallons |
|------------------|-----------|

### IMPACTED MEDIA
