INCIDENT SUMMARY

Caller reported that yesterday around 1600, an estimated 10 barrels of crude oil was released from Roosevelt Unit 11 when the oil dump inside of the production treater was forced to close, creating overpressure and a release of oil from the top of the vessel. It's suspected the unit was tampered with and forced to close. Of the estimated 10 barrels, approximately 15-20 gallons of crude oil misted north of the incident location to an off-site area and impacted soils and vegetation. No surface water or storm drains were impacted.

E & B Oilfield Services Inc. arrived this morning to perform cleanup. Cleanup will include using a micro-blaze agent to digest the oil off of the vegetation. Caller reported the incident to UDOGM via the online reporting system prior to contacting DEQ, and sent an email to the UDOGM field contact. The UDOGM report number is 8486.
