INCIDENT SUMMARY

An operator was grating/scraping the floor of Pit 103. While operating the steering housing "blew apart", and the operator realized that his blade etc wouldn't move. Then he pulled over and stopped, and realized that the hydraulic line had broken. Estimated lost hydraulic fluid is 103 gallons. The operator was working on the floor of the pit, and all hydraulic fluid went to the floor of the pit. Once the machinery was moved, they scraped up the contaminated soil, and placed it into their on-site storage container for future disposal.

UPDATE: There was an error in documentation from Simplot. The actual amount spilled was 12 gallons, not 103.
